CURRICULUM VITAE

Lorenzo Germini

AI Product Engineer shipping AI products end-to-end across compliance, health, and education

Updated October 2026

lorenzo.germini@icloud.com Cuneo, Italy, CET lorenzogermini.com

PROFILE

I'm an AI product engineer: I ship AI products end-to-end, from the models and infrastructure to the interface people actually touch, and stay on the hook for whether the thing helps anyone. Full stack in the literal sense: backend, frontend, and the product calls in between.

These days that's the AI engine behind Complaion, a compliance platform for European SMEs getting and keeping ISO certifications. The interesting problem is making the agents in the background reliable enough to trust with real compliance work, and knowing when they're not. Before that: AI for pharma manufacturing at GSK, AI R&D in digital health, and a GenAI EdTech startup I built as founding engineer. The through-line hasn't changed. Technical depth only matters when it meets a real user problem.

Outside work: sports, side projects, and rabbit holes on tech entrepreneurship and biohacking.

EXPERIENCE

AI Product Engineer Complaion May 2025 - Present Cuneo, Italy

- Complaion helps European SMEs implement, maintain, and get real value from ISO certifications.
- Building the agentic AI core of the product: agents and automation workflows that combine business context with expert feedback, backed by evaluations that track reliability in production.
- Shaping product decisions with business stakeholders and shipping AI features end-to-end, from problem definition to production, across AI, backend, and frontend.

Founding AI Engineer Stealth GenAI Startup Nov 2024 - Apr 2025 Cuneo, Italy

- Built the backend and GenAI API layer from zero on AWS (DynamoDB, Amplify, Lambda) for an EdTech product.
- Built a RAG stack on pgai with custom parsing pipelines for machine-readable and handwritten content, and used tracing and evaluation workflows to tune prompts and retrieval quality.
- Led MVP engineering, managing two other developers.

AI Engineer GSK Sep 2023 - Oct 2024 Saint-Amand-les-Eaux, France

- Found inefficiencies across pharmaceutical utilities with Python and multi-source sensor data, and designed water rejection strategies projected to save 10,000 m^3 a year.
- Built anomaly detection and time-series forecasting for manufacturing operations, and semantic NLP for fault detection and maintenance decisions.
- Built natural-language interfaces and generative AI use cases that made plant data usable on the floor.

Teacher and Digital Freelancer Self Employed Nov 2022 - Aug 2023 Cuneo, Italy

- Taught math and physics at my old high school.
- Built an interior-design MVP with Stable Diffusion and Dreambooth fine-tuning on a hand-curated dataset of room designs I preprocessed myself. Killed it on the evidence after customer discovery.

Engineering Intern Burgeon Labs Feb 2022 - Oct 2022 Geneva, Switzerland

- Fine-tuned language models for abstractive summarization of biomedical literature, deployed as an end-to-end pipeline for the company's first digital health product.

Summer Intern, Think Tank in Innovation & Sustainability Roche Jul 2021 - Oct 2021

Basel, Switzerland

- Took a personalized-medicine filling prototype through hardware-software integration testing, and built a gradient-boosted tree ML model that tunes fill parameters 20% faster than manual tuning.

PROJECTS

Quadrell

Independent Studio · Websites · Automations

My independent studio, building websites and workflow automations for small businesses and independent professionals. I handle each project from the initial brief to launch, and build around how the business already works.

L'Oracolo della Ghigliottina

Side Project · Archived · Generative AI · Next.js · Vercel AI SDK · Telegram Bot · WhatsApp Bot

An archived AI game companion for La Ghigliottina, the final round of the Rai 1 quiz show L'Eredità. It found the word connecting five clues, submitted as text or as a photo of the TV, and handled rate limits. The service is closed. Past results are still available to browse.

Biomedical Paper Summarizer

MSc Thesis Project · Generative AI · PyTorch · Python · Gradio

MSc thesis work: an end-to-end pipeline that turns full-text biomedical papers into either a detailed analysis or a TL;DR, tuned on longevity and human-health literature.

EDUCATION

MSc in Life Sciences Engineering (specialization in Neuroscience & Neuroengineering)

Swiss Federal Institute of Technology Lausanne (EPFL) 2020 - 2022

Bachelor's Degree in Electrical Engineering Polytechnic of Turin 2017 - 2020

SKILLS

AI systems: LLM agents · RAG · Evals & tracing

Product engineering: Full-stack development · Python · Coding agents in the loop
