

## CURRICULUM VITAE

# Lorenzo Germini

AI Product Engineer shipping production systems end-to-end across compliance, health, and education

## PROFILE

AI Product Engineer with a generalist mindset, I operate at the intersection of technical execution, product thinking, and business strategy. My track record spans architecting multi-provider LLM infrastructure, agentic RAG systems, and full-stack AI product features — shipped end-to-end in fast-paced environments.

From AI and intelligent systems in pharma manufacturing to AI R&D in digital health, founding a GenAI startup, and now building the AI engine behind a compliance platform — each step reinforced one belief: the best AI engineers connect technical depth to real user problems. Outside work, I'm into sports, GenAI side projects, and rabbit holes on tech entrepreneurship and biohacking.

---

## EXPERIENCE

### AI Engineer **Complaion** May 2025 - Present Turin, Italy

- Building the AI engine behind Complaion, a compliance automation platform helping European SMEs achieve and maintain ISO certifications.
- Architecting multi-provider LLM infrastructure (OpenAI, Claude, Gemini), agentic RAG systems, and AI evaluation frameworks.
- Shipping end-to-end AI product features while contributing to product strategy and supporting cross-functional teams with automation workflows.

### Founding AI Engineer **Stealth GenAI Startup** Nov 2024 - Apr 2025 Turin, Italy

- Spearheaded the development of an EdTech web application product, architecting and implementing the backend infrastructure on AWS (DynamoDB, Amplify, Lambda) and the Generative AI API layer from the ground up.
- Engineered a robust RAG stack with pgai, custom and state-of-the-art parsing pipelines, plus tracing and evaluation workflows to systematically refine prompts, outputs, and retrieval quality across machine-readable and handwritten content.
- Led engineering execution for the MVP in close collaboration with the Product Manager, contributing to team coordination, product strategy, and end-to-end delivery.

### AI Engineer **GSK** Sep 2023 - Oct 2024 Saint-Amand-les-Eaux, France

- Led process optimization initiatives across pharmaceutical utilities, using Python and multi-source sensor data to identify inefficiencies and design water rejection strategies projected to save 10,000 m<sup>3</sup> annually.
- Built predictive and anomaly-detection solutions for manufacturing operations, combining semantic NLP and time-series forecasting to improve fault detection and maintenance decision-making.
- Developed operational AI tools, including natural-language interfaces and generative AI use cases, to make plant data more accessible and support smarter production decisions.

### Teacher and Digital Freelancer **Self Employed** Nov 2022 - Aug 2023 Cuneo, Italy

- Taught Math and Physics at my high-school alma mater, reconnecting with my hometown community. Shared my passion for STEM and fostered a renewed sense of purpose before the next chapter of my career.
- Developed an interior design MVP using Stable Diffusion, implementing Dreambooth fine-tuning on personally curated datasets of room designs. Created custom training datasets through careful selection and preprocessing of interior design examples.
- Led comprehensive market research and user outreach efforts, engaging with interior design firms and potential customers to validate product-market fit. Leveraged insights to make a data-driven decision to conclude the project.

## Engineering Intern **Burgeon Labs** Feb 2022 - Oct 2022 Geneva, Switzerland

- Developed and deployed a Generative AI tool for biomedical literature analysis, leveraging fine-tuned language models trained on curated scientific datasets. Implemented an end-to-end pipeline for abstractive text summarization.
- Collaborated with the CEO to define product management strategies and streamline business processes for the company's first digital health product, successfully establishing a partnership with a renowned clinic.
- Actively engaged with various business functions to understand user needs and drive impactful solutions, demonstrating a strong commitment to improving health outcomes through technology.

## Summer Intern - 'Think Tank in Innovation & Sustainability' **Roche** Jul 2021 - Oct 2021

Basel, Switzerland

- Managed development of customized filling machine prototype for personalized drug supply, including hardware-software integration testing and collaboration with external partners.
- Improved tuning of filling prototype by creating a Machine Learning model (gradient-boosted tree) to optimize fill parameter determination for Personalized Medicine solutions, reducing tuning time by 20% compared to manual methods.
- Emphasized the practical applications of machine learning to drive innovation in personalized medicine, showcasing ability to translate technical expertise into real-world impact.

## SELECTED SYSTEMS

---

### L'Oracolo della Ghigliottina

Side Project · Generative AI · Next.js · Vercel AI SDK · Telegram Bot · WhatsApp Bot

AI game companion for La Ghigliottina, the cult final round of Italy's most-watched quiz show L'Eredità. Players send 5 clue words (typed or snapped from TV) and the AI finds the single connecting word — having hit 100% accuracy so far, while being built to handle rate-limit abuse and optimize usage.

### Biomedical Paper Summarizer MSc Thesis Project · Generative AI · PyTorch · Python · Gradio

Developed a Generative AI powered tool for extracting key takeaways from biomedical papers with adjustable levels of detail. Created an end-to-end pipeline for processing full-text research articles into both detailed analyses and concise TL;DR formats, focusing on longevity and human health domains.

## EDUCATION

---

### MSc in Life Sciences Engineering (specialization in Neuroscience & Neuroengineering)

**Swiss Federal Institute of Technology Lausanne (EPFL)** 2020 - 2022

**Bachelor's Degree in Electrical Engineering Polytechnic of Turin** 2017 - 2020

## SKILLS

---

**AI systems:** Generative AI · LLMs · RAG

**Product engineering:** Full-Stack Development · TypeScript · Python

**Data systems:** Postgres · pgvector
